

*AJ*

1. (Amended) A computer-implemented method of generating secure endorsed transactions [comprised of transaction data representative of transactions and unique identifiers corresponding to parties endorsing the transactions], the method comprising [the steps, performed by a data processing system, of]:

receiving transaction data corresponding to a transaction and at least one unique [identifiers] human identifier; and

generating a unique [codes] code from the transaction data and the unique [identifiers] human identifier, wherein the unique [codes constitute] code constitutes a secure [endorsements] endorsement of the transaction [data] by the [parties] party corresponding to the unique human identifier[s].

2. (Amended) The method of claim 1, wherein the generating step includes the substep of:

formatting the unique code[s], the transaction data, and the unique human identifier[s] to produce a single whole representation[s] of a secure endorsed transaction[s].

3. (Amended) The method of claim 1, wherein the data processing system includes a storage means, and wherein the generating step includes the substep of:

storing the unique code[s], the transaction data, and the unique human identifier[s] in the ~~memory~~<sup>storage</sup> means.

*C*

17. (Amended) The process of claim [17] 16, wherein the comparing step includes the substep of:

transmitting verification signals to the central controller indicating that neither the
